## **Q2. NON-CALCULATOR**

MathsUpGrade.co.uk

20 men, 10 women and 10 children are in a competition.

The mean score for the women is 15.6. The mean score for the children is 9.2

Kevin says that the mean score for all 40 people is 11.2

(a) Work out the mean score for the men.

|   | (3)   |
|---|-------|
| evin was wrong. The mean score for all 40 people was actually 11.15 |       |
| b) How does this affect the mean score for the men?                 |       |
|   |       |
|   |       |
|   |       |
|   | (1)   |

|---|-----------------------------------|
| Q3. NON-CALCULATOR  |                                   |
| Mr Brown gives his class a test.  |                                   |
| The 10 girls in the class get a mean mark of 70%. The 15 boys in the cla  | ss get a mean mark of 80%         |
| Nick says that because the mean of 70 and 80 is 75 then the mean mark class in the test is 75%                                  | c for the whole                   |
| Nick is not correct. Is the correct mean mark less than or greater than 75  | 5%? You must justify your answer. |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   | (Total for question = 2 marks)    |
| Q4. NON-CALCULATOR  |                                   |
| 4 red bricks have a mean weight of 5 kg. 5 blue bricks have a mean we 1 green brick has a weight of 6 kg.                       | ight of 9 kg.                     |
| Donna says, "The mean weight of the 10 bricks is less than 7 kg."   |                                   |
| Is Donna correct? You must show how you get your answer.  |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   | (Total for question = 3 marks)    |
| Q5. NON-CALCULATOR  | (Total for quodien of marke)      |
| Walkden Reds is a basketball team.  |                                   |
| At the end of 11 games, their mean score was 33 points per game.  At the end of 10 games, their mean score was 2 points higher. |                                   |
| Jordan says, "Walkden Reds must have scored 13 points in their 11th ga  | ame."                             |
| Is Jordan right? You must show how you get your answer.   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |
|   |                                   |

(Total for question is 3 marks)

## Visit MathsUpGrade.co.uk for Questions, Clues & Solutions **Q6. NON-CALCULATOR** Mark has 18 bags of counters and 12 boxes of counters. The mean number of counters in all 30 bags and boxes is 14 The mean number of counters in the 18 bags is 10 Mark says, "The mean number of counters per box is 4" Is Mark right? You must show how you get your answer. MathsUpGrade.co.uk (Total for question = 3 marks)

The manager of a clothes shop recorded the size of each dress sold one morning.

The manager says, "The mean size of the dresses is **not** a very useful average."

(ii) Which is the more useful average for the manager to know, the median or the mode?

**Q7. CALCULATOR ALLOWED** 

(i) Explain why the manager is right.

The sizes of dresses are always even numbers.

The mean size of the dresses sold that morning is 15.3

(Total for question is 2 marks)
